# TOP ROLLERS

## TOP ROLLER SHELL (ARBOURS)

- Shells are manufactured using high graded alloy steels, hardened and tempered.
- They are heat treated at HRC 55\*-60\*precision ground and inspected for longer life and durability
- Maximum eccentricity is maintained at  $\pm 0.02\text{mm}$ .

## RUBBER COTS

- The Cots are moulded type or mounted with Alu-core press fit, easy fit and Glue respectively
- We offer quality cots for a wide range of international brands like **Accotex, Berkol, Yamauchi, Inarco, Precitex, Supertex, MSB Kurekha** etc
- The Shore hardness of our cots is maintained between 63\* to 85\*
- A special feature in the form of a spiral groove of 1mm depth is provided which enables removal of trash particles in the carded cotton and blends.
- A selected brand of Alu lined cots, meant for high reliability in terms of speed and productivity are press fit cots, pressed using our special hydraulic mounting machine. The Alu lined cot mounted Top Rollers fit like a hand and glove and their fitting strength results in less vibration, stability, easy fitting process and no worry about cracking in the cot. Another noteworthy mention is its environmental friendliness, no glue or solvent material is required for the mounting process. This also results in fast dismounting of the cot since no residual material needs to be removed from the surface.

## ENDBUSHES

- The End Bushes are manufactured from special steel material. They fit many international brands of anti-friction thrust needle bearing or needle cages like **INA, FAG, SKF, TORRINGTON, NTN** and **NRB** for lasting life.
- The High Speed performance is guaranteed since Germany needle cages are used which takes care of over heat dissipation & ensures smoother running and guaranteed lasting life.
- Many of the End Bushes are designed with self locking system which vetoes fluff accumulation.
