FEATURES

- Very Quiet
- Light Weight
- High Efficiency
- Easy Installation
- External rotor motors
- Certifications: CE & CCC
- Protection class IP44 & Thermal class F
- Available with AC external rotor motor

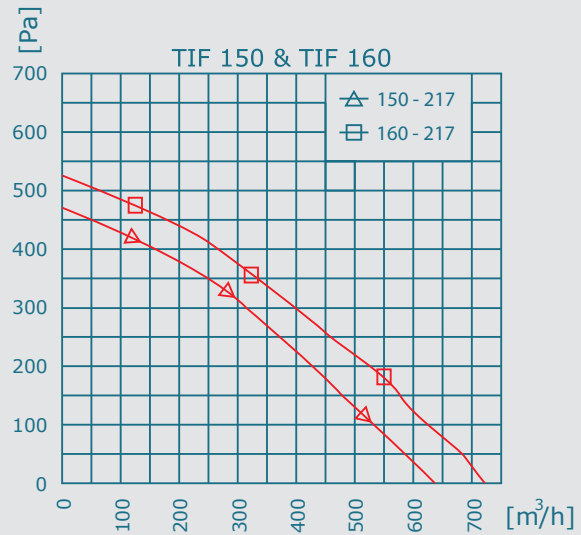

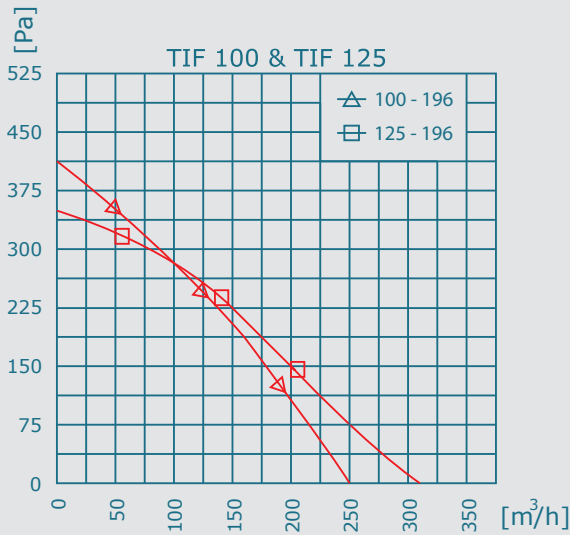

Axial fans are best suited for inline flow applications but they cannot withstand high static. Centrifugal fans are used wherever we need air to move against high static pressure but they throw the air at 90 degrees to the suction direction. When these centrifugal fans are put inside a circular duct, the direction of flow becomes inline and this is how we get a Circular inline fan.
