## Web Applications / Portals

# Got an IDEA for Web Application?

## We create amazing website apps!

We work on various popular web development platforms. Systems developed at Vimal Sales are fully responsive and tailored to specific and different business needs and innovation.

---

## Why Develop Custom Web Application?

- ✓ A custom web application is a practical approach for accessing business services.
- ✓ Customised web applications communicate effectively with older systems to fit into the legacy systems and add years to their life.
- ✓ Responsive web applications are expected to be used on tablets, mobile devices and computers thus improving overall flow of information.
- ✓ Custom applications build for any purpose can be deployed on the cloud or in-house. Hence, providing better scope for security.
- ✓ Software built for your business can also be transformed into Software as a service (SAAS) i.e. generating revenue from a tool.
- ✓ Custom software is catered to the needs, without the unnecessary distraction your employees can focus on the work.
- ✓ Using the power of internet one can set staff free from the workplace, so that they can work be effectively from anywhere.

- ✓ Performance is a major factor with off the shelf software as it is designed with every single possibility, thus creating a lot of unnecessary distend and venture in configuration.
- ✓ Since, custom software are developed specific to a business process the time saved in providing training is huge.
- ✓ Using Rapid Application Development (RAD) methodologies, custom web applications can be developed and put into use in a shorter span of time.
